

Amendment to Disposition for IE-0010 (Response 34)

Agreed; we will fully define the information necessary to implement each compatibility setting which was not previously completely described. ~~In addition, we will remove each of these settings (and all other application compatibility settings) from their current location in the specification (Part 4, §2.15.3, pages 1,368-1,487), and place them into a new annex for deprecated features.~~

Proposed amendment: Strike the sentence as shown above.

The result is that these subclauses are not moved, they remain normative, and they are not deprecated (that is, they have conformance class strict).
