

Remove proprietary technologies

NZ-0006, 12, 14, 50, 52

Draft resolution: The examples of non-Microsoft linking technologies Kparts and Bonobo in Part 4: 3.14.11 are incorrect and should be removed.

Draft resolution: All references to proprietary OLE should be removed.

Draft resolution: The DEVMODE binary option should be removed from the spec.

Rationale: Microsoft XPS documentation characterises DEVMODE as having "limited extensibility and portability". As is the case with the "Office Suite binaries to OOXML conversion" being a task for software, so too should DEVMODE binaries be translated to XML XPS Print Tickets outside of OOXML.

Draft resolution: Part 4 2.7.4.1-.2.7.4.5 be altered to remove application-defined defaults.

Rationale: As currently drafted, the default formats are application defined which adversely affects interoperability.

Draft resolution: That MACROBUTTON be removed from Part 4 2.16.5.34.

Rationale: The contents of MACROBUTTON are entirely application-defined.
